

Recover your losses. Recover with DEGLAS®

DEGLAS®

HIGH IMPACT ACRYLIC GLAZING

D ● LIGHT ● FULL ● ENVIRONMENTS

Commercial Greenhouses • Research Facilities
Institutional Greenhouses • Garden Centers

**30 year
guarantee**
against yellowing

Recover with Deglas and SAVE!

When you replace your plastic covering with DEGLAS Acrylic.

Stop recovering your greenhouse with inferior polycarbonate or other plastic coverings that have to be replaced only a few years after installation. Make this the last time you recover your greenhouses due to yellowing. DEGLAS Acrylic will not yellow or degrade due to UV attack and we have a 30 year warranty to back that up. An investment in DEGLAS means improved production, up to 50% energy savings and elimination of the cost and aggravation that comes with having to recover over and over again.

NEW! Recovering just got easier with DEGLAS Aluminum Glazing Systems that can easily be fitted to your existing greenhouse structures. We now have systems for use with both 8 and 16 mm sheet making recovering with DEGLAS simple and cost effective.

Call us today and we'll show you how you'll recover your losses with DEGLAS

30 years of light. We guarantee it!

Are you seeing yellow? Then you're not glazing with DEGLAS® High Impact Acrylic. Unlike DEGLAS, many plastic coverings yellow over time. DEGLAS has been a proven winner for some of the world's leading growers whose greenhouses are glazed with DEGLAS acrylic. Even after 30 years, these greenhouses have shown no visible yellowing and have retained high light transmission. A fact that we are now backing with a new industry leading 30-year no yellowing guarantee. DEGLAS does not yellow – count on it for decades. We guarantee it!

Naturally UV-Stable

Yellowing is caused by the sun's UV rays breaking down the glazing, but DEGLAS acrylic is 100% naturally UV-stable. Polycarbonate and other plastic covers need a UV barrier or coating to delay yellowing, but often need replacement because they have turned yellow. UV barriers are often thin and are highly prone to failure. Only DEGLAS acrylic is inherently UV stable through and through, resulting in its ability to retain high light transmission and clarity. DEGLAS acrylic will not require replacement in 30 years due to yellowness. We guarantee it!

Non-Toxic and Less Smoke

Upon combustion, other plastic coverings produce thick smoke and/or toxic gases that may be very harmful to people and to the environment. Deterioration from UV rays changes the burning characteristics in many such plastics. Thanks to DEGLAS Acrylic's UV stability, its burning characteristics do not deteriorate over time. In the event of fire, DEGLAS burns cleaner with less smoke and no toxic or corrosive gases. We guarantee it!

"I've seen light transmission through polycarbonate and other materials diminish over time due to yellowing. I don't want to have to worry about the consistency of my crops, and DEGLAS takes that worry away"

WARREN JORDAN
Jordan's Greenhouses, Fort Collins, CO
Cut flowers and bedding plants

"Even the 20-year-old acrylic is as clear as the day we installed it. DEGLAS has become our first choice for glazing."

OTTO BULK
Rosa Flora, Dunnville, ON
*Cut flowers - alstroemeria,
anthurium, gerbera, snapdragons
and sweetheart roses.*

More Light Longer

Because it will not yellow, DEGLAS High Impact Acrylic glazing maintains high light transmission throughout its long life. While polycarbonate users experience diminishing light transmission resulting in replacement in as little as 10 years, DEGLAS will retain up to 90% light transmission and clarity for 30 years. We guarantee it!

No Yellowing

Polycarbonate and other plastic coverings yellow visibly over time. DEGLAS does not. Even after 30 years, the absolute yellowness indices (YI) for DEGLAS are among the lowest possible for plastics at the present time. DEGLAS complies with the guaranteed values throughout the world as listed in the table below.

Eco-Friendly

Glazing with DEGLAS High Impact Acrylic is healthy for the environment through reduced emissions and energy savings; environmentally sound manufacturing processes and certified facilities; the elimination of harmful chemicals; and the diversion of waste material from landfill

sites. Our 30-guarantee against yellowing means less glazing going to landfill due to replacement. If you must replace DEGLAS, it can be recycled for use in making consumer goods. Choosing DEGLAS is good for the environment.

Invest for Tomorrow Today

DEGLAS' 30-year guarantee also makes it the best value in glazing. An investment in DEGLAS will pay for itself for years to come. Engineered for long life, strength and durability, DEGLAS offers other great advantages over any other glazing on the market, including:

- Superior energy savings
- Proven hail protection
- Consistent growing conditions
- Patented condensate control
- Industry-leading hail warranty
- Highest light transmission
- Even light distribution
- Heaviest, most rigid panels
- Non-shattering safety glazing
- Excellent return on investment

As leading growers all over the world can attest, DEGLAS is the superior choice for their business. Don't settle for anything else but DEGLAS Acrylic glazing.
